Photonic Technology and Industrial Policy Aug 10 2020 A revolutionary technological development of the late twentieth century, photonics embraces lasers, fiber optics, imaging devices, and optical applications to computing. It affects the fortunes of numerous industries and, other than conventional microelectronics, may now be the leading arena for worldwide technological rivalry. While Japan has seen its photonic industries grow faster than any other high technology sector, the United States, where much of photonics originated, has experienced a declining industrial capability in world markets. Why is the U.S. floundering in this critical new technology? Are market solutions adequate as a national response to such massive technological change? After describing the history and economic implications of photonics, this book places these questions in the context of industrial policy debates about the proper role of government in response to strategic industrial sectors. The author then assesses the U.S. public policy response by examining various government programs directed at photonics. These programs add up to an implicit government photonics policy, but one that is shortsighted, incoherent, and unplanned. Sternberg concludes that it is this failure to plan that explains United States' retrogression in a critical technology.

American Disease Feb 02 2020 In this provocative study of the "disease" afflicting American industry today, George Lodge, a distinguished professor at the Harvard Business School, reveals the malady as a psychological disorder, characterized by a refusal to face the facts of interdependence in a competitive world; by a reluctance to confront the grave inadequacies in the operation of our great institutions—business, labor, and government; and by the fact that "leaders do not lead; those with responsibility do not fight. Timidity, born of resignation, discourages change." Lodge begins by defining the disease through its symptoms: failing industries, stubborn unemployment, lagging economic growth, stagnant productivity, overseas competition, focus on short-term financial gain, and, perhaps most telling, the pervasive feeling among Americans that their land of

plenty has become a land of want. He examines the gradually changing roles and relationships between government, great corporations, and trade unions that are nevertheless obscure by traditional and detrimental assumptions, distrust, and a set of ideologies that are increasingly inefficient, ineffective, inconsistent, and irrelevant. And he finds the incoherence of American industrial policy exemplified by the fact that we preach the old virtues of free trade and the sanctity of the market while in actuality we pursue a strategy—including tax incentives and trade subsidies—the misshapes the free market. Based on interviews with more than 150 leaders of the nation's institutions, *The American Disease* goes beyond diagnosis to offer logical and feasible proposals to cure this dangerous condition. Lodge suggests, for example, that the office of the United States Trade Representative be expanded and strengthened to deal with the growing pressure for protection against imports and with the confusion among our trading partners. He shows why business and labor must work together more closely in a non-adversarial way with federal and local government to determine community needs. He explains why Washington will be forced to direct the future of electric power in America, rather than leave the decisions to fifty different sets of state regulators. And he makes a number of recommendations to alter the ways in which corporations manage themselves and deal with government, and to reduce the social and economic costs that are implicit in these changes. George C. Lodge believes that recovery from our institutional ailments is possible, and this timely and perceptive book offers a resoundingly rational course toward that crucial goal.

Marketing Moves Feb 13 2021 The Internet, globalization, and hypercompetition are dramatically reshaping markets and changing the way business is done. The problem, says internationally renowned marketer Philip Kotler and his coauthors Dipak C. Jain and Suvit Maesincee, is that marketing has not kept pace with the markets. In today's world, customers are scarce—not products—and classic marketing needs to be deconstructed, redefined, and broadened to reflect this new reality. *Marketing Moves* describes the next transformational imperative for marketing—and for any organization competing in our customer-ruled, technology-driven marketplace. It calls for a fundamental rethinking of corporate strategy to enable the ongoing creation and delivery of superior value for customers in both the marketplace and the market space. And it appoints marketing as the lead driver in shaping and implementing this new strategy. The means for accomplishing this lies in a radically new marketing paradigm the authors call holistic marketing—a dynamic concept derived from the electronic connectivity and interactivity among companies, customers, and collaborators. This new paradigm combines the best of traditional marketing with new digital capabilities to build long-term, mutually satisfying relationships and co-prosperity among all key stakeholders. Outlining a framework for

implementing holistic marketing that calls for integrating customer demand management, internal and external resource allocation, and network collaboration-the authors show how holistic marketing can enable companies to: - Identify new value opportunities for renewing their markets - Efficiently create the most promising new value offerings - Deliver products, services, and experiences that more precisely match individual customer requirements - Consistently operate at the highest level of product quality, service, and speed Thought-provoking and practical, *Marketing Moves* shows how to build a complete marketing platform primed for the challenges and opportunities of a customer-centric world. AUTHORBIO: Philip Kotler is the S.C. Johnson Son Distinguished Professor of International Marketing at the Kellogg Graduate School of Management at Northwestern University in Chicago. Dipak C. Jain is Dean of the Kellogg Graduate School of Management. Suvit Maesincee is a Professor of Marketing at the Sasin Graduate Institute of Business Administration at Chulalongkorn University in Bangkok, Thailand.

Industry Structure and Pricing Oct 12 2020 Industry Structure and Pricing: The New Rivalry in Infrastructure extends current economic models by incorporating effects of actual and potential rivalry in markets outside the markets of immediate interest. Focusing on the contestable model, the author shows how diverse patterns of actual and potential rivalry, called multilateral rivalry or MLR, affect the appropriateness of many regulatory policies. It is specifically shown that many conclusions of the contestability literature are overly generous to firms that might want to protect or extend their monopoly positions. While this book's refinement to existing economic theory gives strong results, it is still based on static production functions and demands - integrated to provide a dynamic view of multilateral rivalry.

It's all part of a fundamental change taking place in the nature of business, contends Jeremy Rifkin. After several hundred years as the dominant organizing paradigm of civilization, the traditional market system is beginning to deconstruct. On the horizon looms the Age of Access, an era radically different from any we have known.
