Enuma Elish Nov 03 2020 The Babylonian and Assyrian Legends Concerning the Creation of the World and of Mankind. The Enuma Elish is one of the oldest stories known to mankind. It is a story first written down by the ancient Sumerians thousands of years ago. As a one time assistant in the Department of Egyptian and Assyrian Antiquities at the British Museum, L.W. King provides us with a qualified translation of the tablets which were originally written in cuneiform script. The Enuma Elish is receiving renewed interest from modern researchers delving into the origins of mankind, the earth, and the solar system. Over the centuries a copy ended up in the library at Nineveh in the 7th century B.C., and was uncovered by archaeologists in the late 1800s. Written in cuneiform text and preserved on seven clay tablets, the entire story was called "The Seven Tablets of Creation". After being translated the story revealed how the planets became aligned, how a cosmic catastrophe affected the earth, how mankind came upon the scene, and how the "gods" played a role in all of it. The Seven Tablets of Creation have had many profound implications since they were first discovered and subsequently published. They predate many parts of the Book of Genesis as well as other worldwide creation myths. Volume One includes this epic poem's English translation. It also includes information on parallels in Hebrew literature, the date and origin of the Babylonian creation legends, and more. Volume Two includes other accounts of creation, an Assyrian "Tower of Babel" story, and supplementary texts showing the actual cuneiform tablets.

Advances in Geometry and Lie Algebras from Supergravity Jun 22 2022 This book aims to provide an overview of several topics in advanced differential geometry and Lie group theory, all of them stemming from mathematical problems in supersymmetric physical theories. It presents a mathematical illustration of the main development in geometry and symmetry theory that occurred under the fertilizing influence of supersymmetry/supergravity. The contents are mainly of mathematical nature, but each topic is introduced by historical information and enriched with motivations from high energy physics, which help the reader in getting a deeper comprehension of the subject.

Visitors to Verona Jan 25 2020 Even before the advent of mass tourism, Verona was a popular destination for travellers, including those undertaking the popular 'Grand Tour' across Europe. In this book, Caroline Webb compares the experiences of travellers from the era of Shakespeare to the years following the incorporation of the Veneto into the new kingdom of Italy in 1866. She considers their reasons for visiting Verona as well as their experiences and expectations once they arrived. The majority of English visitors between 1670 and 1760 were young members of the aristocracy, accompanied by tutors, who arrived on their way to or from Rome, as part of a 'Grand Tour' intended to 'finish' their classical education. With the Industrial

Revolution in the second half of the eighteenth century, and the resultant increasing wealth of the upper middle classes, the number of visitors to Verona increased although this tourism was derailed once Napoleon invaded Italy in the late 1790s. After 1815 and the allied victory at Waterloo there was a new flood of visitors, previously deprived of the opportunity of continental travel during the Napoleonic wars. As the nineteenth century progressed, especially with the arrival of the railway, an increasing number of visitors appeared from across Europe and even from across the Atlantic, keen to explore the fabled city of Shakespeare's Romeo and Juliet. In comparing a myriad of varied accounts, this book provides an unrivalled perspective on the history of one of Italy's most seductive cities.

Briggs' Information Processing Model of the Binary Classification Task Sep 20 2019 First published in 1983. Routledge is an imprint of Taylor & Francis, an informa company. This monograph is a review of the evolution of George Briggs' informationprocessing model from a general schema beginning with the work of Saul Sternberg (1969a) and Edward E. Smith (1968) to a fairly well-detailed schematic representation of central processes that Briggs was working on at the time of his early death. The development of Briggs' model of the binary classification task (BCT) spanned the period from 1969 when he published his first report on choice reaction time with Blaha (Briggs & Blaha, 1969) to 1977 with the publication of a posthumous paper (Briggs, Thomason, & Hagman, 1978). The model evolved across a total of 16 experimental and 2 review papers.
