*The Routledge International Handbook of Financialization* Jul 21 2021 Financialization has become the go-to term for scholars grappling with the growth of finance. This Handbook offers the first comprehensive survey of the scholarship on financialization, connecting finance with changes in politics, technology, culture, society and the economy. It takes stock of the diverse avenues of research that comprise financialization studies and the contributions they have made to understanding the changes in contemporary societies driven by the rise of finance. The chapters chart the field's evolution from research describing and critiquing the manifestations of financialization towards scholarship that pinpoints the driving forces, mechanisms and boundaries of financialization. Written for researchers and students not only in economics but from across the social sciences and the humanities, this book offers a decidedly global and pluri-disciplinary view on financialization for those who are looking to understand the changing face of finance and its consequences.

Concepts of Biology Nov 12 2020 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this

course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

**A Taipei Mutt** Feb 02 2020 Arriving in Taiwan to begin a stint teaching English, Louis K. allows himself to be seduced by a mysterious woman in a bank. Back at her apartment, she turns out to be a witch, and after changing him into a Scotch terrier mutt, adds him to her backyard kennel of previous conquests, all now dogs. This is the improbable beginning of Eric Mader's novel of canine life in Taiwan's capital. Once set loose on Taipei's streets, Louis embarks on the almost impossible mission of getting himself changed back. But as the weeks turn into months, he finds that his human personality is slipping away, swallowed up by ever sharper canine senses and an ever weakening grip on his once human self. A zany, multilayered satire of expat expectations and inter-cultural vertigo. [This is a substantially re-edited 2017 edition of the original novel.] An engrossing read . . . A remarkable and high-spirited performance. It's the sort of book that could overnight easily become a local cult item. -Taipei Times Recreates the streets of a vibrant, tawdry and little-known Asian city. Future critics will consecrate Mader as the Defoe of Dogdom. -Ryu Makoto, author of *The Hospitality of Circumstance* and *Caught in the Act* Mader is . . . an endlessly fascinating eccentric, and absolutely everything he puts his hand to is very well worth reading. -Bradley Winterton, author of *Gladovia*

Traditions & Encounters Aug 29 2019 "This is History Book. It explored the grand scheme of world history as a

product of real-life human beings pursuing their individual and collective interests. It also offered a global perspective on the past by focusing on both the distinctive characteristics of individual societies and the connections that have linked the fortunes of different societies. It has combined a clear chronological framework with the twin themes of traditions and encounters, which help to make the unwieldy story of world history both more manageable and more engaging. From the beginning, Traditions & Encounters offered an inclusive vision of the global past—one that is meaningful and appropriate for the interdependent world of contemporary times"--
